

What is Image Processing

2

- Images
- Image Processing and Computer Vision
- Applications
 - Human Perception
 - Machine Vision Applications
 - Image Compression
 - Biometrics
- Key Stages in Digital Image Processing

What is an Image

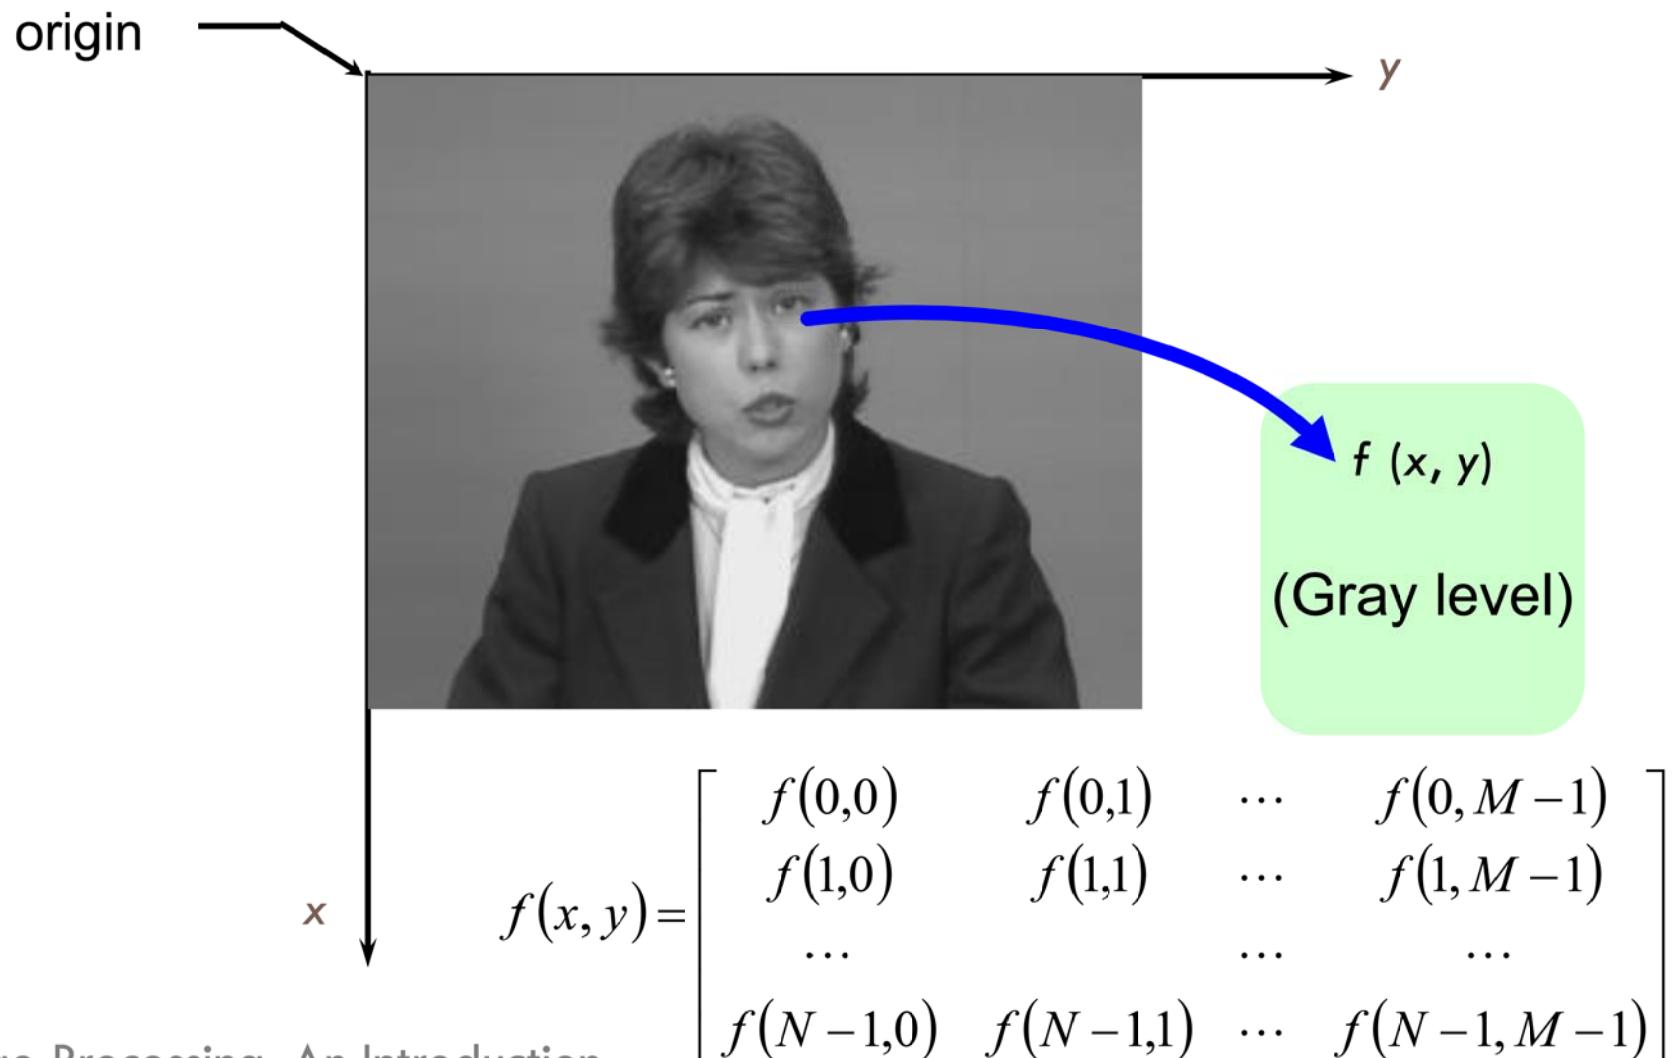

3

- An Image is a 2D function, $f(x, y)$
 - Where x and y are spatial coordinates
 - Amplitude of f at any pair of coordinates (x, y) is called the intensity or gray level of the image.
- When spatial coordinates and amplitude values are all finite, discrete quantities, the image is called as Digital image.

A Digital Image

4

Digital image representation

Types of Digital Image

5

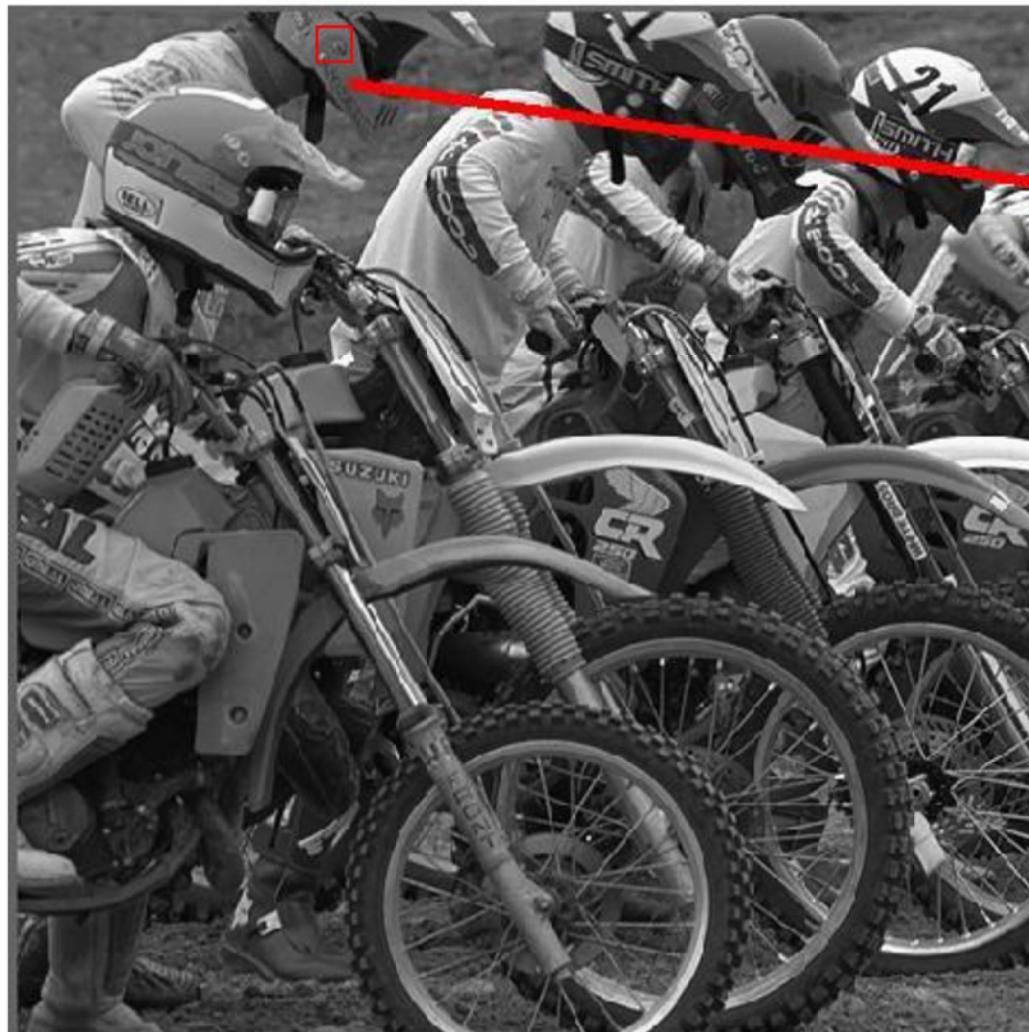

- Black-n-White Image
 - Binary Image (two-tone)
 - Gray level Image (gray-tone)
- Color Image

Another classification

- Still Image
- Movie Image (Video Sequences)

Grayscale Image

Indexed Image (MATLAB)

9

Why do we Process Images

10

- To facilitate their storage
 - Efficient storage in digital cameras
 - Video streaming on the internet
- To prepare them for display or printing
 - Halftoning
 - It is a reprographic technique that simulates continuous tone imagery through the use of dots, varying either in size, in shape or in spacing.
 - Adjust Image size
- To enhance or restore them
 - Improve visibility of features
 - Repair photographic errors
- To extract information from them
 - Face recognition
 - Aerial surveillance

Image Processing Tasks

14

- Image Processing is concerned with lower level tasks
 - Sampling and Quantization
 - Noise removal
 - Restoration
 - Enhancement
 - Geometric manipulation

Computer Vision Tasks

15

- Computer Vision is concerned with higher level tasks
 - Morphological operations
 - Edge Detection
 - Feature extraction
 - Shape analysis
 - Image Detection and Registration

History of Digital Image Processing

16

- **Early 1920s:** One of the first applications of digital imaging was in the news-paper industry
 - The Bartlane cable picture transmission service
 - Images were transferred by submarine cable between London and New York
 - Pictures were coded for cable transfer and reconstructed at the receiving end on a telegraph printer

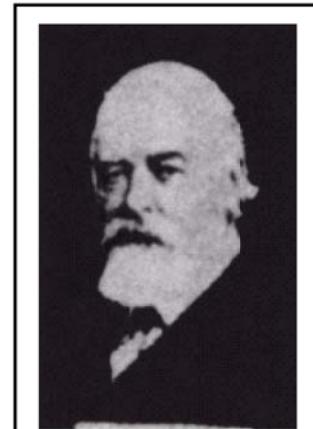

Early digital image

History of DIP (cont...)

17

- Mid to late 1920s: Improvements to the Bartlane system resulted in higher quality images
 - New reproduction processes based on photographic techniques
 - Increased number of tones in reproduced images

Improved
digital image

Early 15 tone digital image

History of DIP (cont...)

18

- **1980s - Today:** The use of digital image processing techniques has exploded and they are now used for all kinds of tasks in all kinds of areas
 - Image enhancement/restoration
 - Artistic effects
 - Medical visualisation
 - Industrial inspection
 - Law enforcement
 - Human computer interfaces

IP Applications: Human Perception

19

- Noise Filtering
- Contrast Enhancement
- Image Deblurring
- Image Correction
- Image Inpainting
- Image Fusion
- Image Stitching
- Transformations
- Astronomy
- Weather Forecasting
- Medical Imaging
- Artistic Effects
- Document Image Analysis
- Hyperspectral Imaging

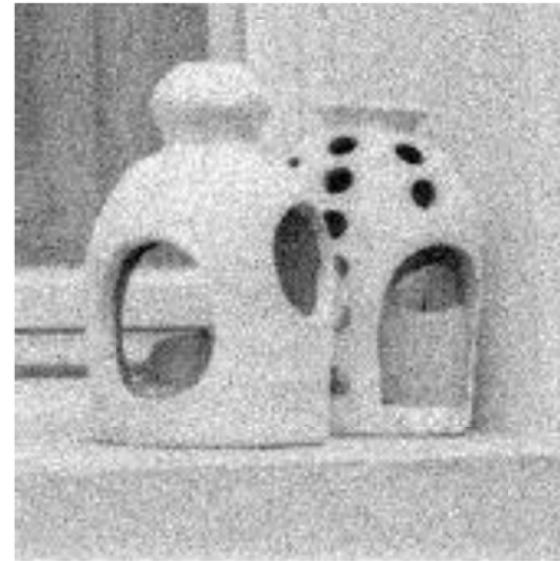

Noise Filtering

20

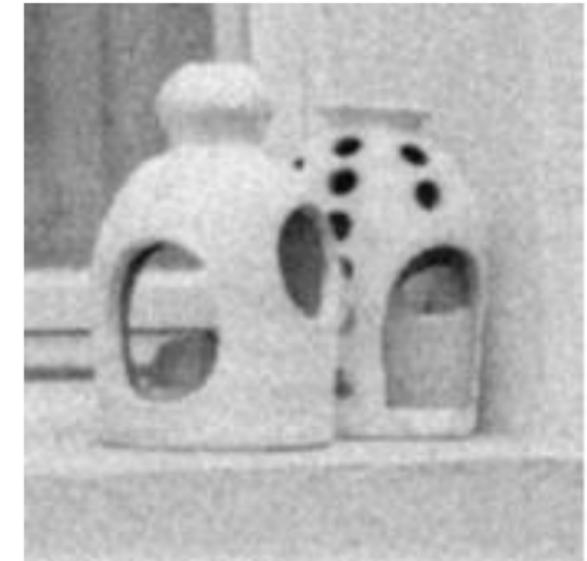

The procedure of reducing the noise components of an image so as to enhance its information is known as **Noise filtering**.

Original Image

Noised Image

Mean Filtered Image

Contrast Enhancement

21

- Contrast enhancement increases the total contrast of an image by making light colors lighter and dark colors darker at the same time.

Original Image

Enhanced Image

Image Deblurring: Motion Blur

22

- Used to restore deblurred images when the camera or object is moved during exposure

Original Image

Blurred Image

Restored Image

Image Deblurring: Out of Focus Blur

23

- Used to restore deblurred images when the camera was not focused properly!!

Original Image

Blurred Image

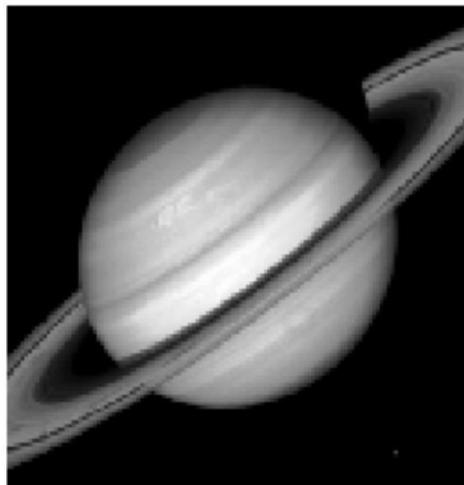

Restored Image

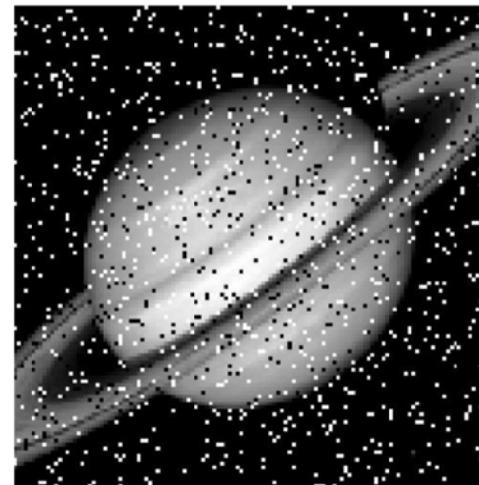

Image Correction

24

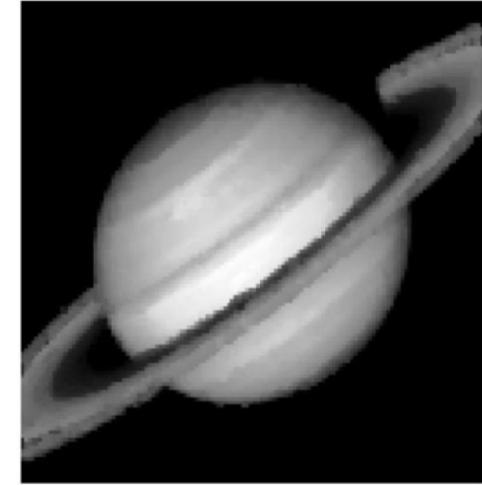

- Needed when image data is erroneous:
 - Bad transmission
 - Bits are missing: *Salt & Pepper Noise*

Original Image

Noisy Image

Corrected Image

Image Inpainting

25

- Image Inpainting is the process of reconstructing lost or deteriorated parts of images. It also improves brightness, color etc.

Original Image

Processed Image

Image Fusion

26

- Image fusion is the process of combining relevant information from two or more images into a single image. The resulting image will be more informative than any of the input images.

Image1 & Image2 fused to get Image3

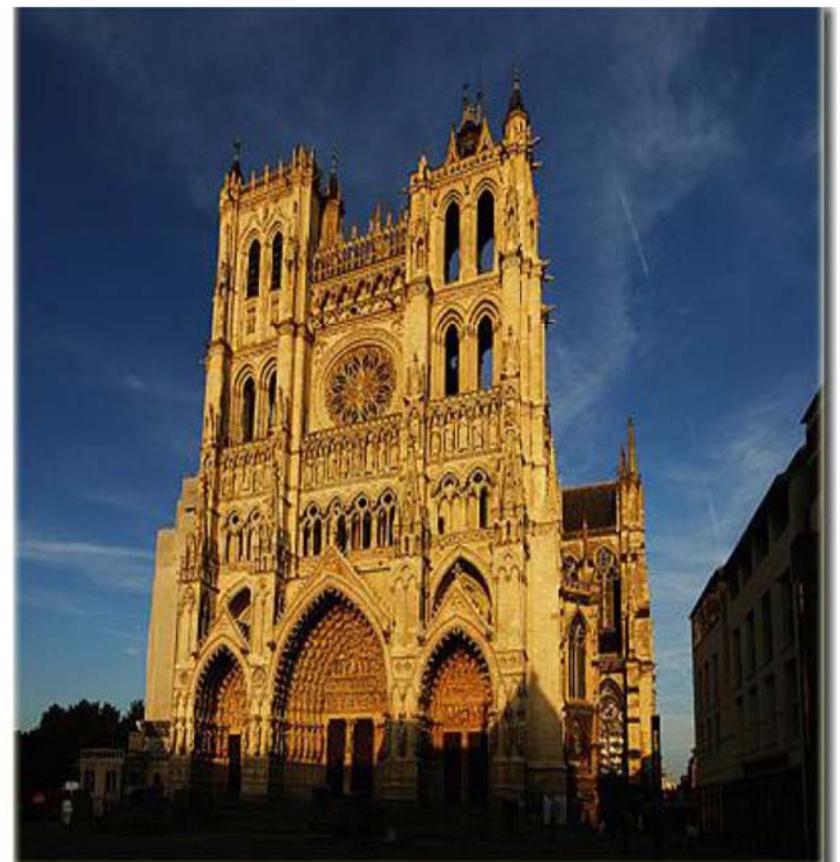

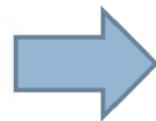

Image Stitching

27

- **Image stitching** is the process of combining multiple photographic images with overlapping fields of view to produce a segmented panorama or high-resolution image.
- Most approaches to Image stitching require nearly exact overlaps between images and identical exposures to produce seamless results.

Image Stitching (Contd)

28

Geometric Transformations

29

- Rotate + scale

- Shear

Astronomy

30

- With a modest telescope or digital camera, we can produce beautiful images of galaxies and nebulas. However, raw images produced through a telescope still require significant enhancement to bring out the secrets hidden within them, which can be easily done using Image Processing.

Raw Image

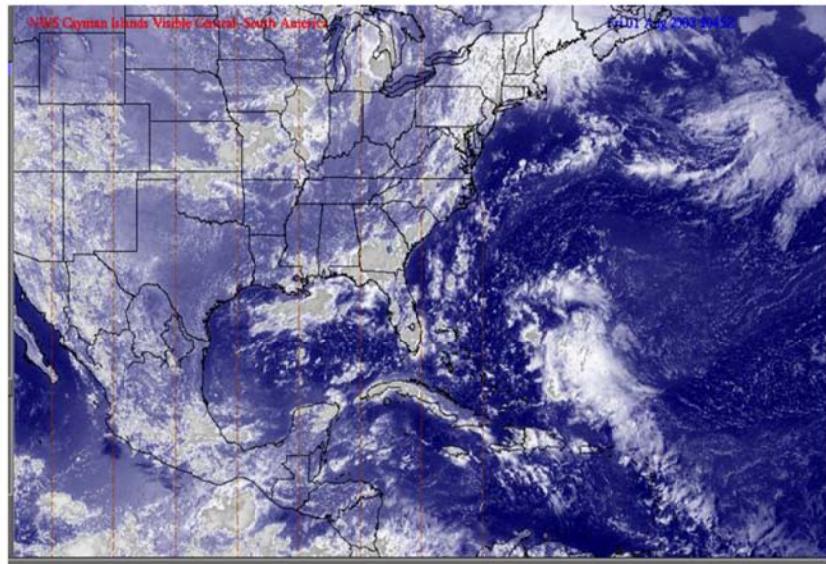

Processed Image

Weather Forecasting

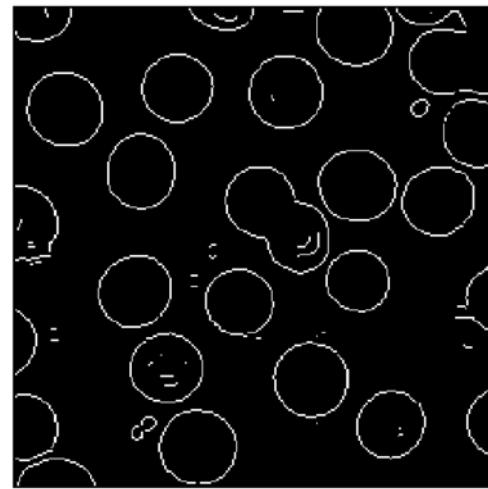

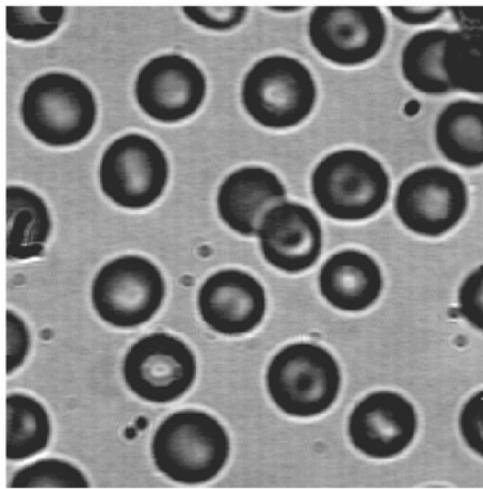

31

- Image processing combined with the skills and experience of meteorologist, offer solutions to a large range of weather forecasting problems such as defining & modeling weather patterns.

Medical Image Processing

32

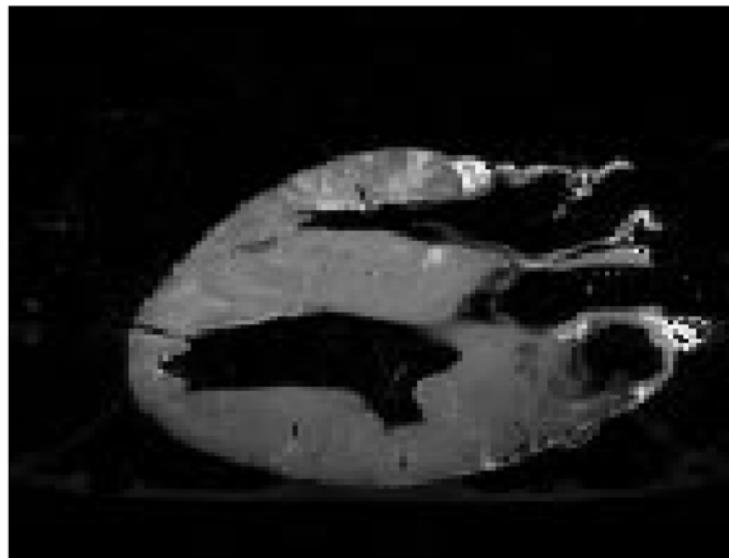

- Image Processing is widely used
- e.g. Analysis of microscopic images

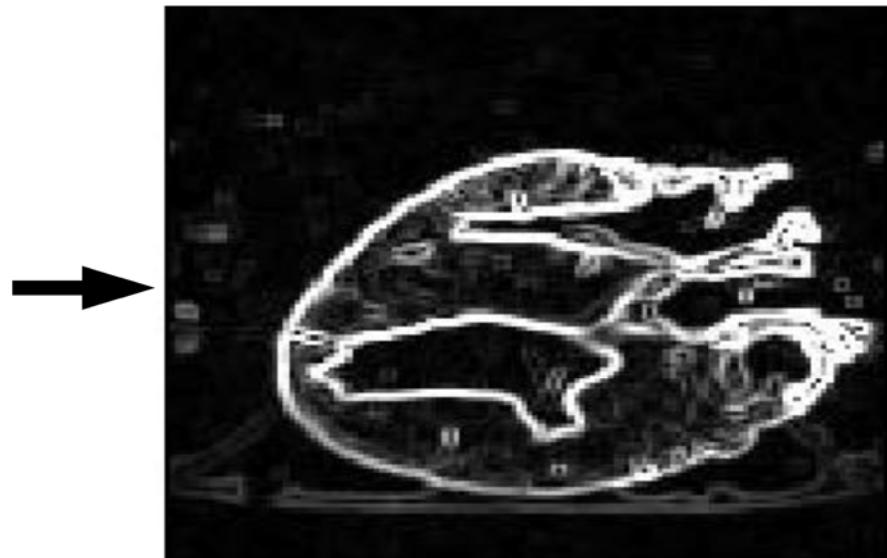

Medical Image Processing (Contd)

33

- Take slice from MRI scan of canine heart, and find boundaries between types of tissue
 - Image with gray levels representing tissue density
 - Use a suitable filter to highlight edges

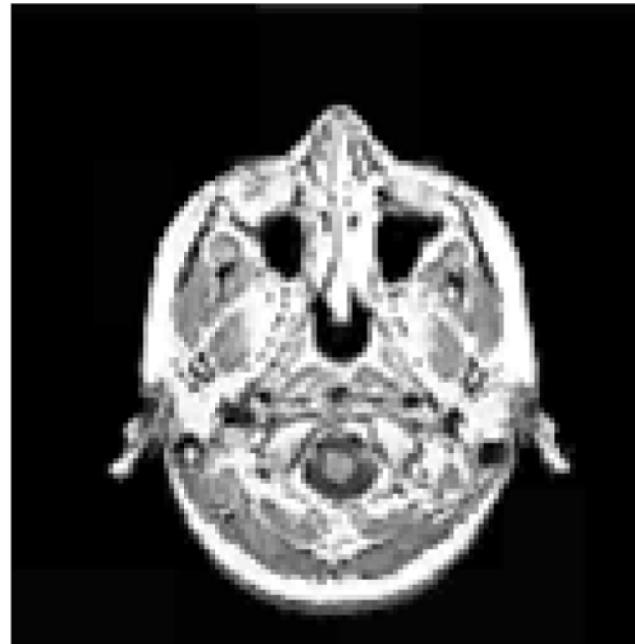

Original MRI Image of a Dog Heart

Edge Detection Image

Medical Image Processing (Contd)

34

- MR/CT Imaging of a human body
- Use for Brain Surgery

Artistic Effects

35

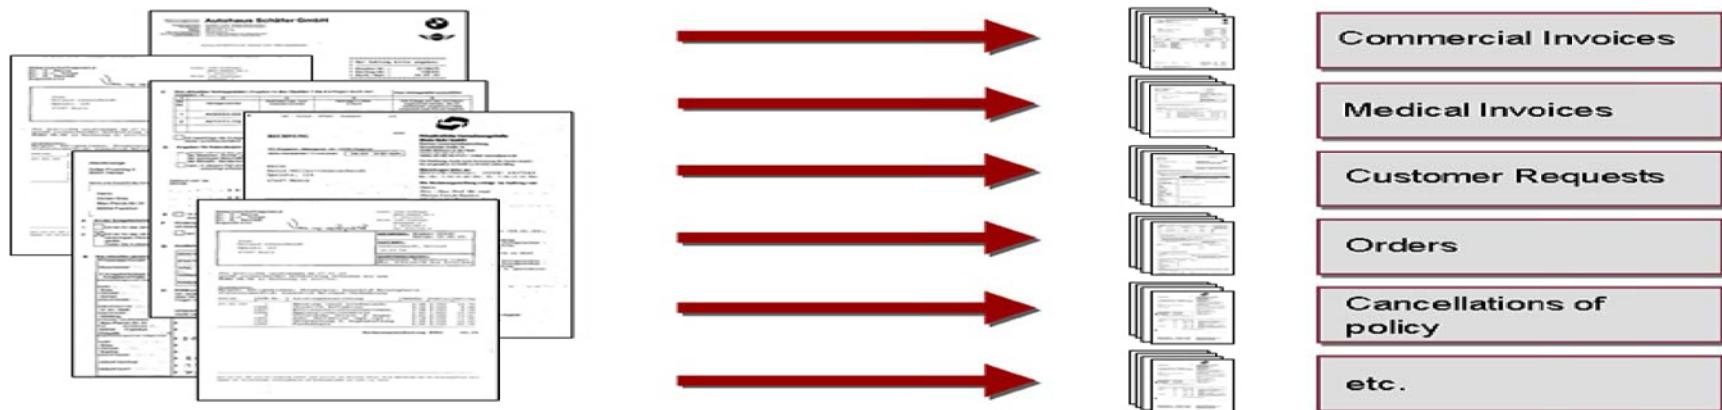

- Artistic effects are used to make images more visually appealing, to add special effects and to make composite images

Document Image Analysis

36

- Document image analysis refers to algorithms that are applied to images of documents to obtain a computer-readable description from pixel data. A well-known document image analysis product is the Optical Character Recognition (OCR) software that recognizes characters in a scanned document.

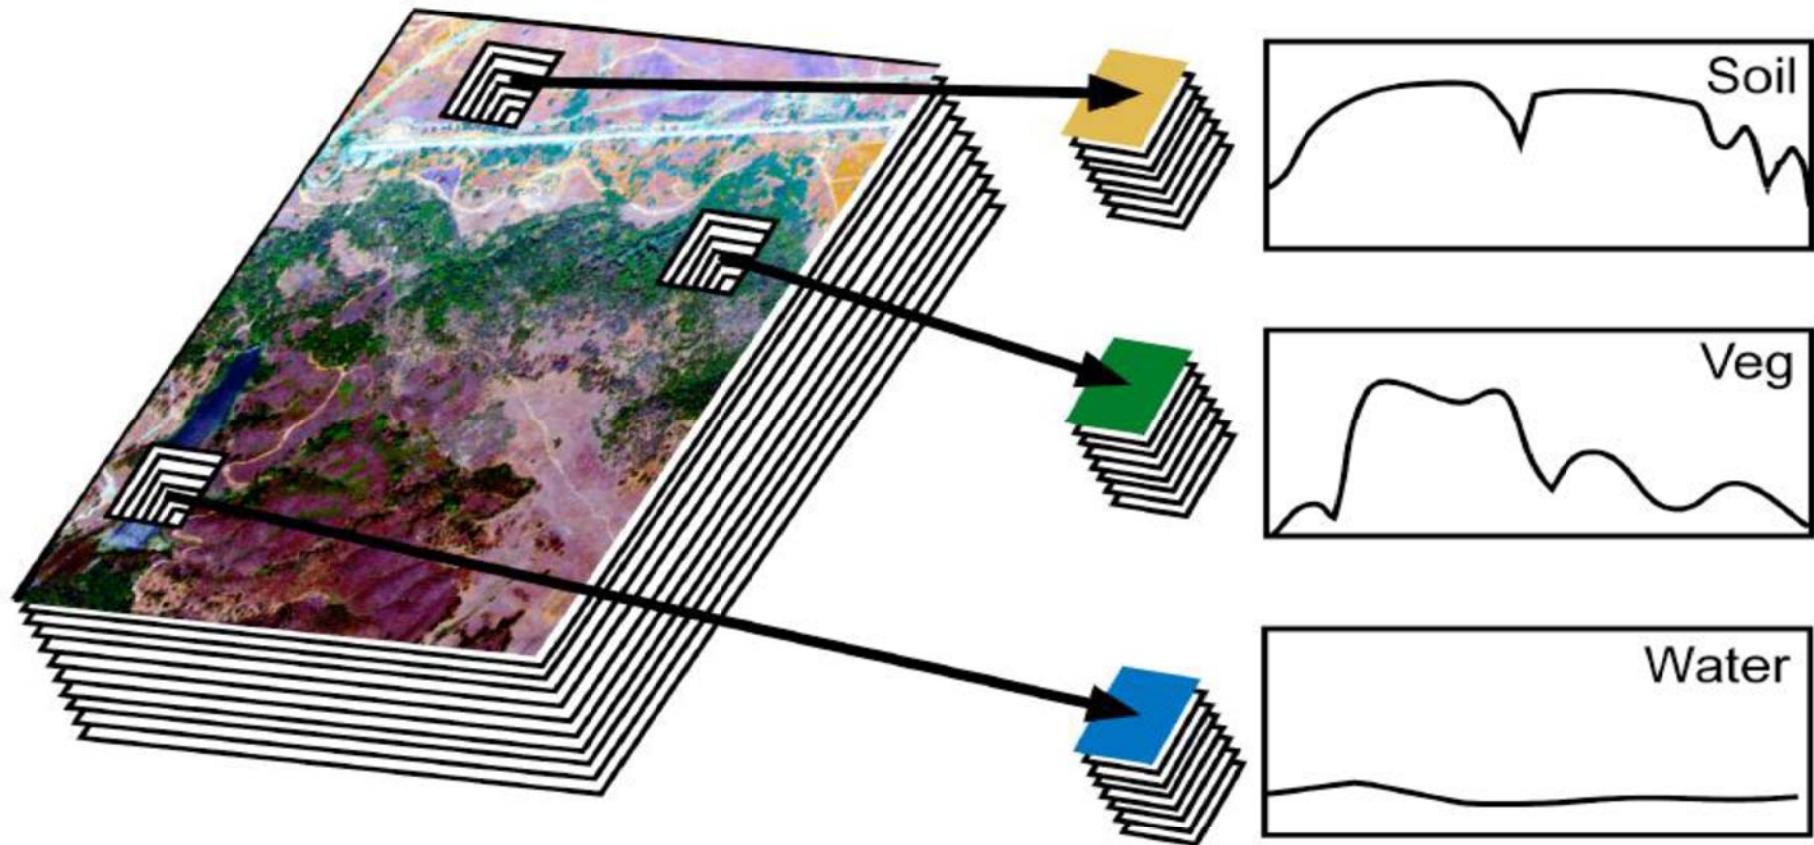

Hyperspectral Imaging

37

- Hyperspectral imaging collects and processes information from across the electromagnetic spectrum. It divides the spectrum into many more bands instead of only three.
- Hyperspectral images have been used for mineral mapping, to detect soil properties, to identify vegetation species, to detect military vehicles etc.

Hyperspectral Imaging (Contd)

38

The concept of hyperspectral imagery. Image measurements are made at many narrow contiguous wavelength bands, resulting in a complete spectrum for each pixel.

Machine Vision Applications

39

- Object Detection and Tracking
- Video Matching
- Color Based Video Tracking
- Foreground Extraction
- Virtual Tour
- Industrial Inspection
- PCB Inspection
- License Plate Recognition

Object Detection and Tracking

40

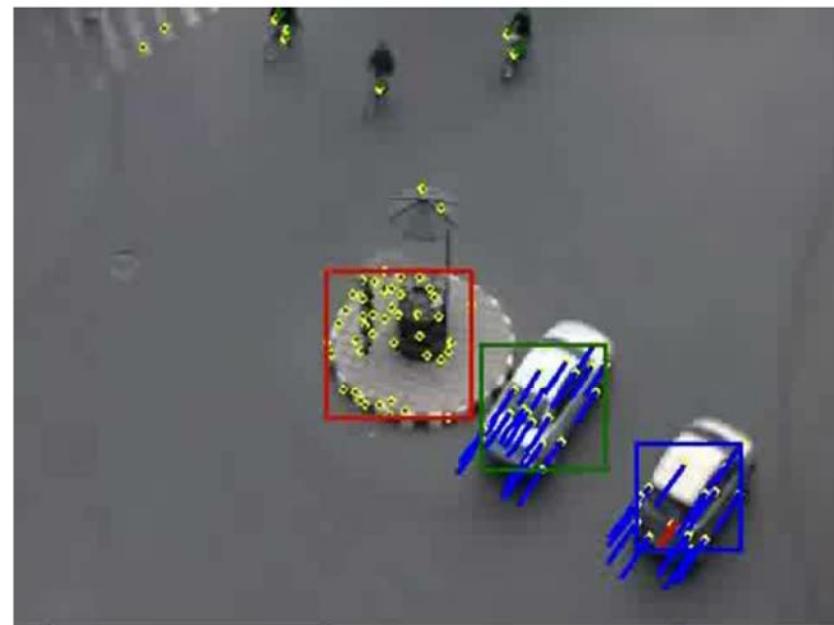

- Object tracking is important because it enables several important applications such as: Security and surveillance - to recognize people, to provide better sense of security using visual information.

Video Matching

41

- Video matching is the process of locating a moving object (or multiple objects) over time. Its' objective is to depict the path of target objects in consecutive video frames.

Color Based Video Tracking

42

- Color based video tracking tracks objects based on a specific color and also shows the size of the object in consecutive video frames in terms of number of pixels.

Foreground Extraction

43

- Foreground Extraction is the process of segmenting the foreground objects from the background.

Virtual Tour

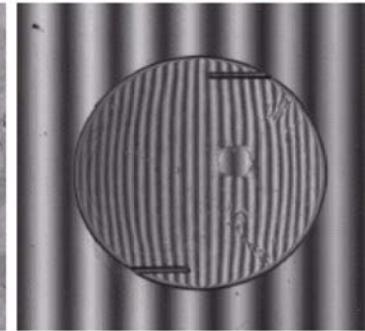

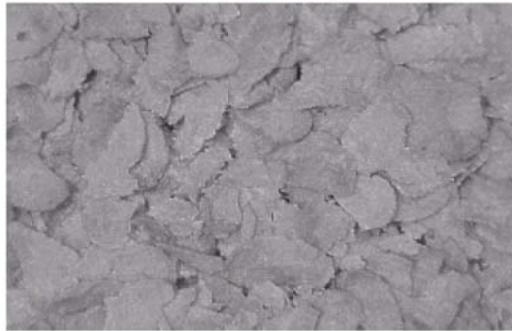

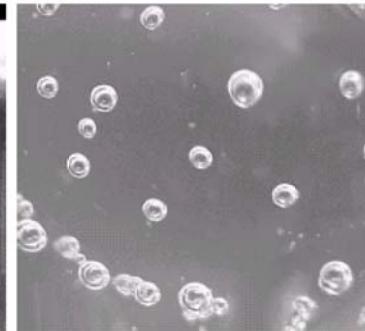

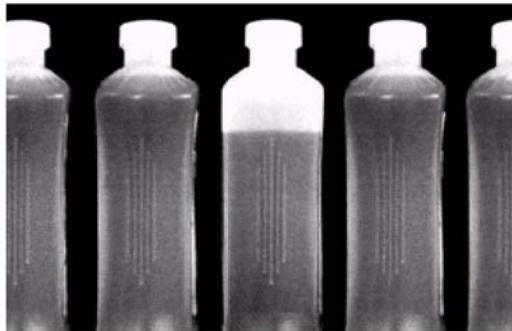

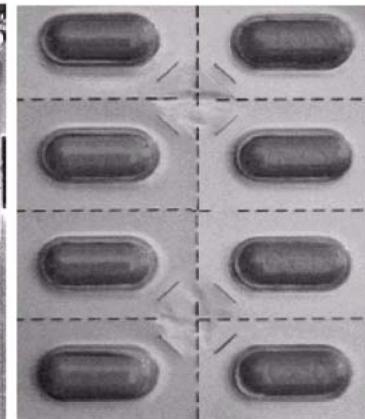

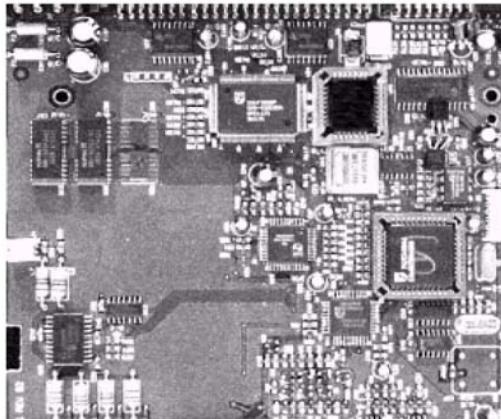

44

- A Virtual tour is a simulation of an existing location, usually composed of a sequence of video images. They may also include sound effects, music, narration, text. They are used extensively for universities and in the real estate industry

Industrial Inspection

45

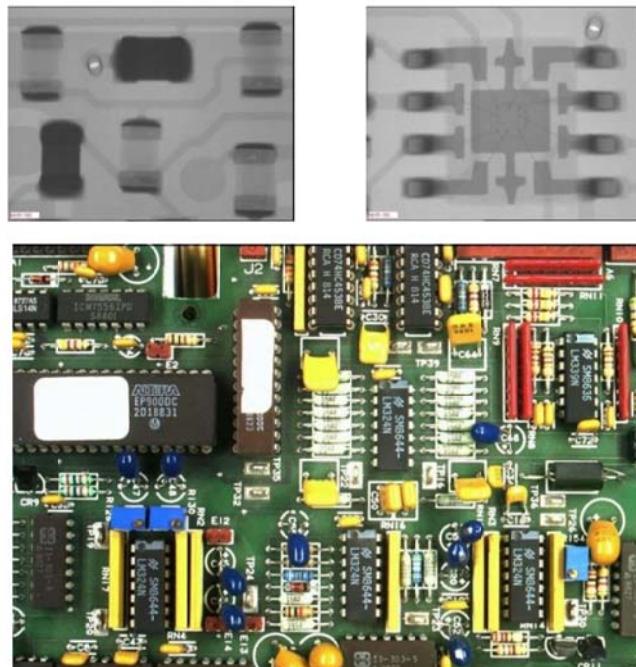

- Human operators are expensive, slow and unreliable
- Make machines do the job instead
- Industrial vision systems are used in all kinds of industries
- Can we trust them?

PCB Inspection

46

- Printed Circuit Board (PCB) inspection
 - Machine inspection is used to determine that all components are present and that all solder joints are acceptable
 - Both conventional imaging and x-ray imaging are used

License Plate Recognition

47

- License Plate Recognition is a mass surveillance method that uses optical character recognition on images to read the license plates on vehicles. LPR have wide range applications in Access control, Parking, Tolling, Border control etc.

In this example, the gate has just been automatically raised for the authorized vehicle, after being recognized by the system.

Image Compression

48

- Reduced storage
- Reduction in bandwidth
- Removes redundancy
 - Pixel redundancy
 - Coding redundancy
 - Psycho visual redundancy
- Compression ratio a vital fact

Image Compression (Contd)

49

Uncompressed
Image

Image compressed
With ratio 1:35

Image compressed
With ratio 1:90

Conveyer belt applications

50

- Checking and sorting
 - For example: checking bottles in the supermarket
- Quality control
 - Does the object have the correct dimensions, color, shape, etc.?
 - Is the object broken?
- Robot control
 - Find precise location of the object to be picked

Biometrics

51

- Recognizing/verifying the identity of a person by analyzing one or more characteristics of the human body
- Characteristics:
 - Fingerprint, eye (retina, iris), ear, face, heat profile, shape (3D face, hand), motion (gait, writing), ...
- Applications:
 - Verifying: Access control (bio-passports)
 - Recognizing: Surveillance: 9/11

Biometric Applications

52

An Iris Recognition System

Biometric Applications

53

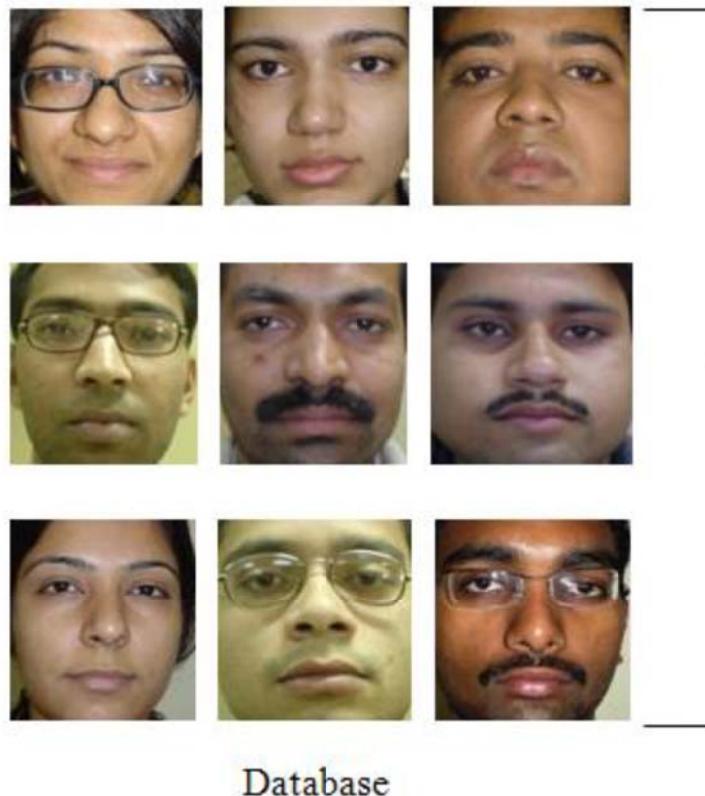

Bio Passport system using Fingerprint Biometric

Biometric Applications

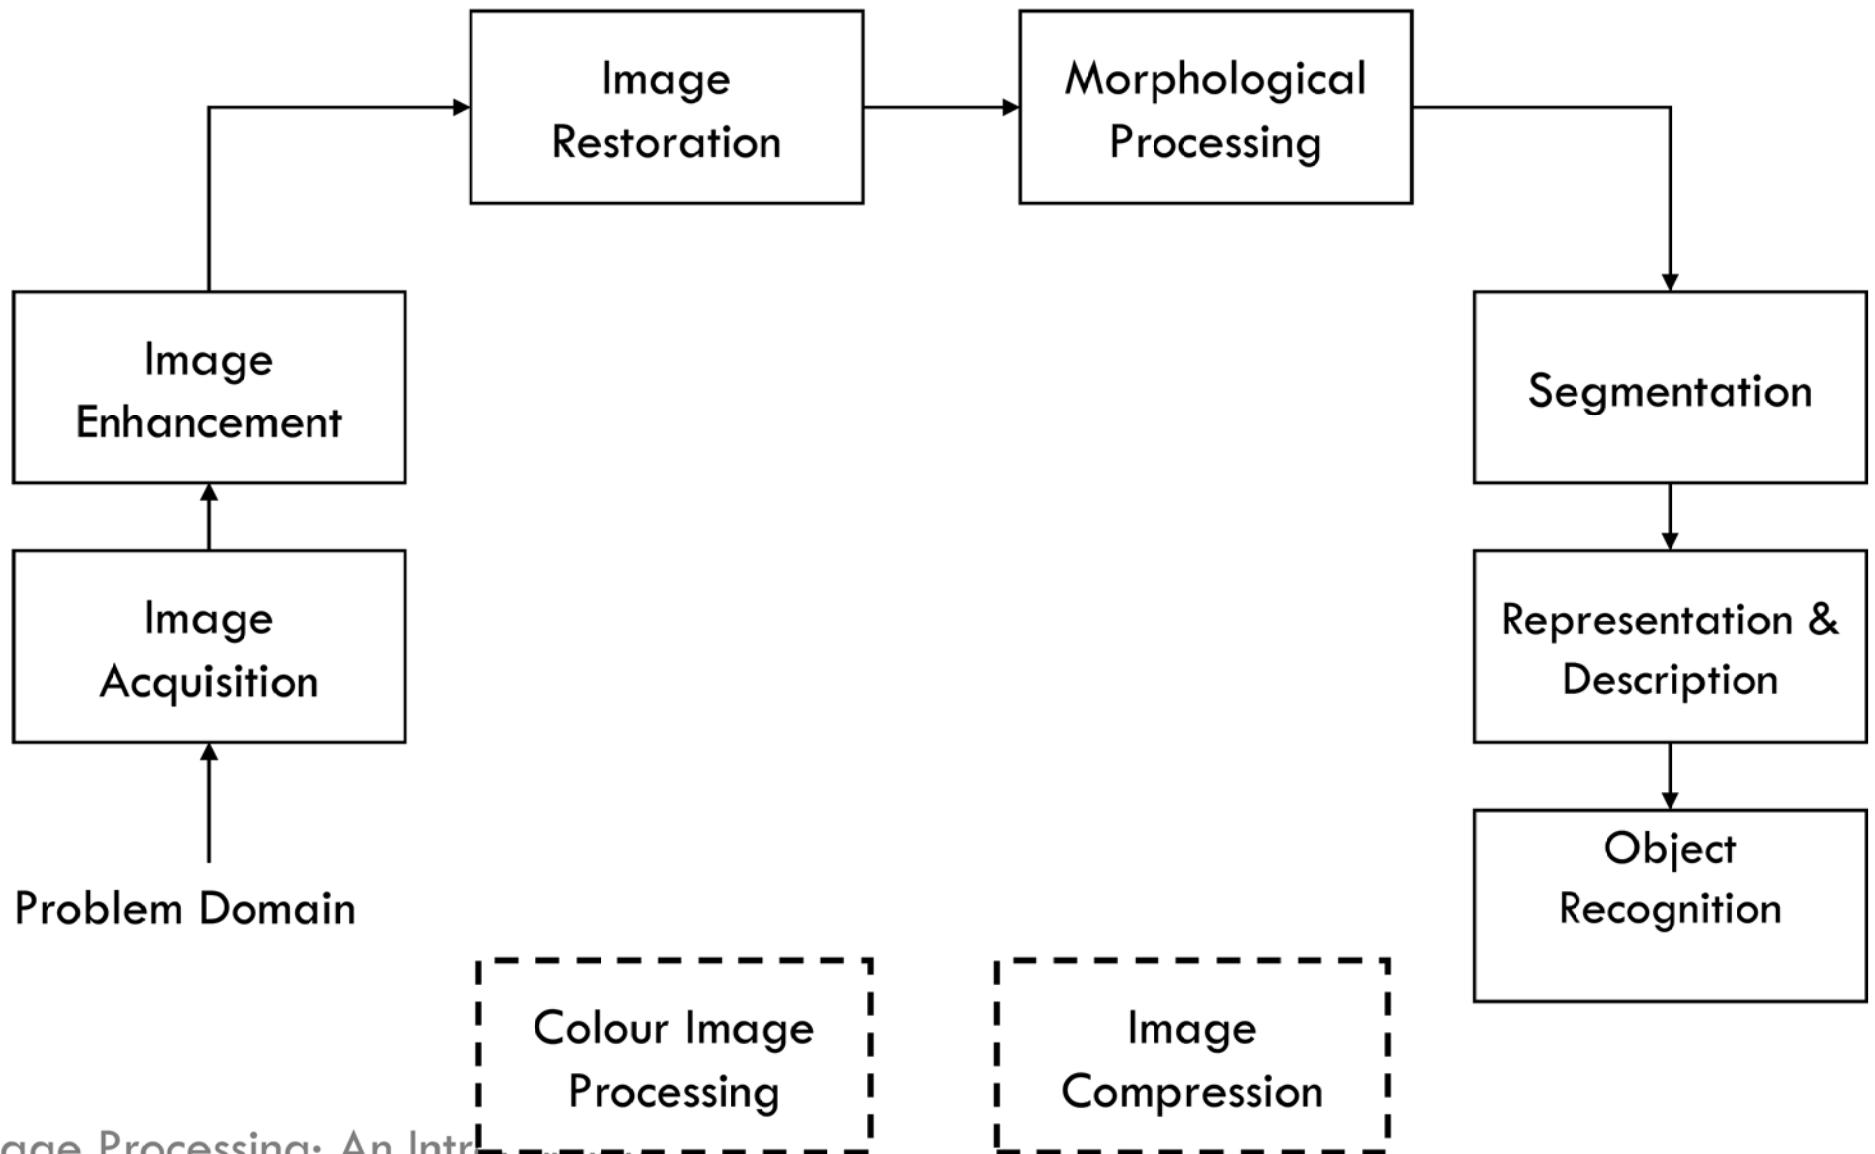

54

Classification of Multi model Biometric databases
